

Verano[®] MAKE THIS YOUR MOMENT

METRO-, BASIC- AND VITRO COLORS

LIGHT AND WARMTH REGULATION

A lack of daylight will affect our mood and health, but an abundance of sunlight and daylight can actually be harmful. The solution is simple: make sure you have good sun protection, for example in the form of ritzscreens®. The fabric collections have been specifically developed to allow ritzscreens® to regulate light and heat as effectively as possible. Sun rays are reflected, absorbed and transmitted as soon as they hit the sun protection fabric, depending on the fabric density and color. Lighter fabrics offer a minimal UV protection of 95% and darker fabrics can offer up to 100% UV protection. The fabrics will also ensure you can maintain good views of the outside, will limit views into your home, result in less of an annoying glare and provide optimal ventilation without any insect nuisance. Would you like more information about our ritzscreens®? Then enjoy a browse through our extensive brochure.

FABRIC CHARACTERISTICS

The fabrics have a flame-retardant effect  and have an additional four properties: the transmission of energy (TS), the reflection of energy (RS), the absorption of energy (AS) and the openness factor (OF). So how exactly does that work?

V599 - Ritzscreen® | White | Fabric 71.1103

THE TRANSMISSION OF ENERGY (TS)

The amount of solar energy transmitted through the sun protection fabric. The higher the percentage, the more energy is transmitted through the sun protection fabric.

THE REFLECTION OF ENERGY (RS)

The amount of solar energy reflected by the sun protection fabric. The higher the percentage, the more energy is reflected by the sun protection fabric.

THE ABSORPTION OF ENERGY (AS)

The amount of solar energy absorbed by the sun protection fabric. The higher the percentage, the more energy is absorbed by the sun protection fabric. Darker fabric colors will, for example, absorb more energy and radiate more heat.

THE OPENNESS FACTOR (OF)

The fabric of a ritzscreen® contains small perforations. These perforations, also called the openness factor, indicate how transparent the fabric is. A fabric with an openness factor of 1% is denser woven than a fabric with an openness factor of 5%. This means that a fabric with an openness factor of 5% gives more light.

METRO COLORS

From daring black to elegant sand shades: the trends are there for the taking! For example, black is quite daring and will make the natural shade of the light cooler, white and grey have less of an impact on the light and will guarantee a calm yet stylish look.

VITRO COLORS

Get inspired by all different and bold color tones: color makes atmosphere! Blue makes the natural shade of the light cooler, which ensures peace. Yellow warms up and creates a cozy feeling.
